Catálogo de requisitos

PURE · microcare

Validado el 04-11-2026

Exportado desde Concilia el 04-11-2026 a las 09:41.

122 requisitos:

- Requisitos funcionales: 110
- Requisitos no funcionales: 9
- Requisitos de integración: 2
- Requisitos técnicos: 1

Cada requisito está escrito en EARS o en MASTeR, con su obligatoriedad: shall (obligatorio), should (recomendable) o may (opcional). Las fuentes, como DOC-01#F007, son fragmentos de la documentación del proyecto: su texto está en el anexo A. Las preguntas, como P-003, se hicieron al cliente: están en el anexo B con su respuesta.

Requisitos funcionales (110)

RF-001

the Voucher Management System SHALL support the one-year Mbarara pilot and its anticipated sale of 20,000 vouchers with distributor and individual-salesperson tracking.

EARS · shall (obligatorio) · Fuentes: DOC-01#F055, DOC-01#F102, DOC-01#F170 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-002

the Voucher Management System SHOULD BE ABLE TO support later growth in geographic coverage and voucher volume beyond the Mbarara pilot.

MASTeR · should (recomendable) · Fuentes: DOC-01#F032, DOC-01#F102 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-003

the Voucher Management System SHALL provide authorized users with the ability to create vouchers for the Mbarara pilot.

EARS · shall (obligatorio) · Fuentes: DOC-01#F055, DOC-01#F121, DOC-01#F144 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-004

WHEN creating a voucher, the Voucher Management System SHALL assign it a unique voucher number and project, group-batch, batch and security codes.

EARS · shall (obligatorio) · Fuentes: DOC-01#F121, DOC-01#F125, DOC-01#F126 · Preguntas: P-005 · Iteración: 1

RF-005

the Voucher Management System SHALL generate project codes in the P001 pattern and group-batch codes in the GP0001 pattern, with the allowed characters, lengths and uniqueness scope of all codes and the remaining code formats [TBD].

EARS · shall (obligatorio) · Fuentes: DOC-01#F126, DOC-01#F127, DOC-01#F128, DOC-01#F130, DOC-01#F131, DOC-01#F132 · Preguntas: P-005 · Iteración: 1

RF-006

WHEN creating vouchers, the Voucher Management System SHALL place exactly 100 batches in each group-batch and exactly 10 vouchers in each batch.

EARS · shall (obligatorio) · Fuentes: DOC-01#F128, DOC-01#F130 · Preguntas: P-006 · Iteración: 1

RF-007

the Voucher Management System SHALL provide an authorized user with the ability to configure the minimum number of vouchers per creation run, with the initial minimum [TBD].

EARS · shall (obligatorio) · Fuentes: DOC-01#F145 · Preguntas: P-006 · Iteración: 1

RF-008

IF a voucher-creation request contains fewer vouchers than the configured minimum, THEN the Voucher Management System SHALL reject the request.

EARS · shall (obligatorio) · Fuentes: DOC-01#F145 · Preguntas: P-006 · Iteración: 1

RF-009

WHEN preparing vouchers for printing, the Voucher Management System SHALL render their voucher codes as barcodes on the vouchers and their visit slips.

EARS · shall (obligatorio) · Fuentes: DOC-01#F122, DOC-01#F133, DOC-01#F139 · Preguntas: P-004, P-005 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-010

WHEN producing a client or partner visit barcode, the Voucher Management System SHALL encode the shared voucher number, security code, patient type and initial-consultation, first-follow-up or second-follow-up visit type.

EARS · shall (obligatorio) · Fuentes: DOC-01#F126, DOC-01#F133, DOC-01#F139, DOC-01#F140, DOC-01#F141, DOC-01#F142 · Preguntas: P-004, P-005 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-011

WHEN preparing a voucher for printing, the Voucher Management System SHALL produce client and partner portions under one voucher number with three separately identified visit slips per person.

EARS · shall (obligatorio) · Fuentes: DOC-01#F106, DOC-01#F137, DOC-01#F140, DOC-01#F141, DOC-01#F142 · Preguntas: P-004 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-012

WHEN producing a voucher, the Voucher Management System SHALL store and print its maximum retail price.

EARS · shall (obligatorio) · Fuentes: DOC-01#F136 · Preguntas: P-010 · Iteración: 1

RF-013

IF a user attempts to edit or delete an existing voucher other than through an authorized validity-date amendment or withholding-status change, THEN the Voucher Management System SHALL reject the attempt.

EARS · shall (obligatorio) · Fuentes: DOC-01#F148, DOC-01#F149 · Preguntas: P-007, P-008, P-039 · Iteración: 1

RF-014

WHEN a voucher is created, the Voucher Management System SHALL start its validity on the creation date and determine its expiry by [TBD].

EARS · shall (obligatorio) · Fuentes: DOC-01#F134 · Preguntas: P-007 · Iteración: 1

RF-015

WHEN an authorized user amends a voucher's validity date, the Voucher Management System SHALL apply the amended date to that voucher even if it has already been sold.

EARS · shall (obligatorio) · Fuentes: DOC-01#F135, DOC-01#F149, DOC-01#F150 · Preguntas: P-007 · Iteración: 1

RF-016

IF a voucher has expired at retail sale or treatment or was invalid on the treatment date of a claim, THEN the Voucher Management System SHALL reject the sale, treatment or claim acceptance respectively.

EARS · shall (obligatorio) · Fuentes: DOC-01#F134, DOC-01#F181 · Preguntas: P-007, P-016 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-017

the Voucher Management System SHALL provide an authorized user with the ability to withhold and subsequently release an individual voucher.

EARS · shall (obligatorio) · Fuentes: DOC-01#F148 · Preguntas: P-008 · Iteración: 1

RF-018

IF an action is blocked by a voucher's withheld status under [TBD] withholding rules, THEN the Voucher Management System SHALL reject that action.

EARS · shall (obligatorio) · Fuentes: DOC-01#F148 · Preguntas: P-008 · Iteración: 1

RF-019

the Voucher Management System SHALL maintain distributor records with unique code, name, business type, proprietor name, designation, geographical address, contact number, email address and active or deactivated status.

EARS · shall (obligatorio) · Fuentes: DOC-01#F153, DOC-01#F154, DOC-01#F155, DOC-01#F157 · Iteración: 1

RF-020

IF distributor code, name, business type, proprietor name or address is missing during distributor creation, THEN the Voucher Management System SHALL reject the creation.

EARS · shall (obligatorio) · Fuentes: DOC-01#F155, DOC-01#F156 · Iteración: 1

RF-021

the Voucher Management System SHALL provide users with the ability to maintain distributor address values for district, sub-district, county, sub-county, village or town and street or road.

EARS · shall (obligatorio) · Fuentes: DOC-01#F157, DOC-01#F158 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-022

IF a distributor code already exists, THEN the Voucher Management System SHALL reject creation of another distributor with that code.

EARS · shall (obligatorio) · Fuentes: DOC-01#F154, DOC-01#F159 · Iteración: 1

RF-023

IF a distributor name already exists, THEN the Voucher Management System SHALL warn the user and allow the duplicate name to be saved or changed.

EARS · shall (obligatorio) · Fuentes: DOC-01#F160, DOC-01#F161 · Iteración: 1

RF-024

the Voucher Management System SHALL provide permitted users with the ability to add, edit, activate, deactivate, view and print distributor records.

EARS · shall (obligatorio) · Fuentes: DOC-01#F163, DOC-01#F167, DOC-01#F168, DOC-01#F169 · Preguntas: P-036 · Iteración: 1

RF-025

IF a distributor has child records, THEN the Voucher Management System SHALL reject deletion of that distributor.

EARS · shall (obligatorio) · Fuentes: DOC-01#F168 · Preguntas: P-039 · Iteración: 1

RF-026

the Voucher Management System SHALL provide permitted users with the ability to view and print a selected distributor's history by batch number, purchase date, quantities purchased, sold and returned, and remaining balance.

EARS · shall (obligatorio) · Fuentes: DOC-01#F164, DOC-01#F165, DOC-01#F166 · Preguntas: P-036 · Iteración: 1

RF-027

the Voucher Management System SHALL maintain individual MSIU salesperson records for the pilot with code, name, birth date, age, gender, communication address, contact number and email address without requiring the future country-wide sales-team master.

EARS · shall (obligatorio) · Fuentes: DOC-01#F170, DOC-01#F172, DOC-01#F173 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-028

IF a salesperson code, name, birth date, age, gender or communication address is missing, THEN the Voucher Management System SHALL reject creation of that salesperson.

EARS · shall (obligatorio) · Fuentes: DOC-01#F172 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-029

IF a salesperson code already exists, THEN the Voucher Management System SHALL reject creation of another salesperson with that code.

EARS · shall (obligatorio) · Fuentes: DOC-01#F174 · Preguntas: P-001 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-030

IF a salesperson name already exists, THEN the Voucher Management System SHALL warn the user and permit that name to be retained or changed.

EARS · shall (obligatorio) · Fuentes: DOC-01#F175, DOC-01#F176 · Iteración: 1

RF-031

the Voucher Management System SHALL provide users with the ability to maintain the wholesale voucher rate used for distribution invoices.

EARS · shall (obligatorio) · Fuentes: DOC-01#F181 · Iteración: 1

RF-032

WHEN recording a distribution, the Voucher Management System SHALL record the distributor, individual salesperson, current system date, requested quantity, allocated batch and voucher numbers, voucher validity dates and cash payment mode and show the allocated voucher details.

EARS · shall (obligatorio) · Fuentes: DOC-01#F171, DOC-01#F179, DOC-01#F180, DOC-01#F181, DOC-01#F184, DOC-01#F186 · Preguntas: P-009, P-011 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-033

WHEN recording a distribution, the Voucher Management System SHALL generate its invoice number and calculate its invoice amount as allocated voucher quantity multiplied by the wholesale rate applicable on the distribution date.

EARS · shall (obligatorio) · Fuentes: DOC-01#F181, DOC-01#F182 · Preguntas: P-011, P-013 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-034

WHEN allocating vouchers to a distributor, the Voucher Management System SHALL select unassigned, unexpired and non-withheld vouchers in ascending voucher-number order.

EARS · shall (obligatorio) · Fuentes: DOC-01#F181, DOC-01#F184 · Preguntas: P-007, P-008, P-009 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-035

IF eligible voucher stock is less than the quantity requested for a distribution, THEN the Voucher Management System SHALL reject the entire request without allocating any vouchers.

EARS · shall (obligatorio) · Fuentes: DOC-01#F181, DOC-01#F184 · Preguntas: P-009 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-036

WHEN entering a distribution date, the Voucher Management System SHALL set it to the current system date and reject a future date.

EARS · shall (obligatorio) · Fuentes: DOC-01#F186, DOC-01#F188 · Preguntas: P-011 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-037

WHEN an authorized VMU user enters a distributor-supplied retail sale, the Voucher Management System SHALL record its single voucher number, supplying distributor, customer name and living address, actual sale date, place of sale and actual amount paid.

EARS · shall (obligatorio) · Fuentes: DOC-01#F065, DOC-01#F067, DOC-01#F105, DOC-01#F123 · Preguntas: P-003, P-011 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-038

IF a retail-sale transaction contains more than one voucher for the same customer at one time, THEN the Voucher Management System SHALL reject the transaction.

EARS · shall (obligatorio) · Fuentes: DOC-01#F064, DOC-01#F065, DOC-01#F066 · Preguntas: P-003 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-039

IF a retail-sale date is in the future, THEN the Voucher Management System SHALL reject the sale while allowing entry of its actual past date.

EARS · shall (obligatorio) · Fuentes: DOC-01#F187, DOC-01#F188 · Preguntas: P-011 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-040

WHEN recording retail sales, the Voucher Management System SHALL use the fixed approved retail price, retain each actual amount paid and derive sales totals from individual sale records.

EARS · shall (obligatorio) · Fuentes: DOC-01#F123, DOC-01#F136 · Preguntas: P-003, P-010, P-013 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-041

IF an actual retail-sale amount exceeds the voucher's printed maximum retail price, THEN the Voucher Management System SHALL reject the sale.

EARS · shall (obligatorio) · Fuentes: DOC-01#F136 · Preguntas: P-010 · Iteración: 1

RF-042

the Voucher Management System SHALL provide distributor-wise, individual-salesperson-wise and batch-wise distribution and sales information.

EARS · shall (obligatorio) · Fuentes: DOC-01#F165, DOC-01#F170, DOC-01#F181 · Preguntas: P-001, P-003 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-043

WHEN recording a distributor return, the Voucher Management System SHALL capture the distributor, salesperson, return date, return quantity, return amount and each returned batch and voucher number.

EARS · shall (obligatorio) · Fuentes: DOC-01#F258, DOC-01#F259 · Preguntas: P-012, P-013 · Iteración: 1

RF-044

WHEN entering a distributor return, the Voucher Management System SHALL default its date to the current system date and reject a future return date.

EARS · shall (obligatorio) · Fuentes: DOC-01#F260 · Iteración: 1

RF-045

IF a voucher was not distributed to the returning distributor or has been sold or used, THEN the Voucher Management System SHALL reject its return.

EARS · shall (obligatorio) · Fuentes: DOC-01#F261, DOC-01#F262 · Preguntas: P-012 · Iteración: 1

RF-046

WHEN accepting a distributor return, the Voucher Management System SHALL restore the returned voucher to saleable stock and calculate its refund using the originally invoiced wholesale rate.

EARS · shall (obligatorio) · Fuentes: DOC-01#F259 · Preguntas: P-012, P-013 · Iteración: 1

RF-047

WHEN recording voucher prices, sales, returns, drug prices or claims, the Voucher Management System SHALL use whole [TBD] currency units and round each item using [TBD] rounding rules.

EARS · shall (obligatorio) · Fuentes: DOC-01#F181, DOC-01#F248, DOC-01#F249, DOC-01#F254, DOC-01#F259 · Preguntas: P-013 · Iteración: 1

RF-048

the Voucher Management System SHALL support an approved Mbarara pilot provider network including private, NGO, faith-based and government-hospital providers.

EARS · shall (obligatorio) · Fuentes: DOC-01#F050, DOC-01#F055, DOC-01#F058, DOC-01#F196 · Preguntas: P-002 · Iteración: 1

RF-049

the Voucher Management System SHALL maintain each provider's code, name, physical and communication addresses, health sub-district, locality, facility level and type, registration body, contact person, designation, contact number, email address and active or inactive status.

EARS · shall (obligatorio) · Fuentes: DOC-01#F196, DOC-01#F197 · Preguntas: P-002, P-036 · Iteración: 1

RF-050

IF any provider master field other than contact number or email address is missing during creation, THEN the Voucher Management System SHALL reject that provider's creation.

EARS · shall (obligatorio) · Fuentes: DOC-01#F196, DOC-01#F197 · Iteración: 1

RF-051

WHEN creating a service provider, the Voucher Management System SHALL automatically generate its numeric provider code with the SP suffix.

EARS · shall (obligatorio) · Fuentes: DOC-01#F198 · Iteración: 1

RF-052

IF a new service provider's name already exists, THEN the Voucher Management System SHALL warn the user and save the duplicate name only if the user confirms.

EARS · shall (obligatorio) · Fuentes: DOC-01#F199 · Iteración: 1

RF-053

WHEN offering service providers for new data entry, the Voucher Management System SHALL list active providers while making both active and inactive providers available for reports.

EARS · shall (obligatorio) · Fuentes: DOC-01#F204 · Preguntas: P-022 · Iteración: 1

RF-054

the Voucher Management System SHALL provide permitted users with the ability to add, amend and delete service-provider records and payment terms and to change provider activation status according to MSIU management decisions.

EARS · shall (obligatorio) · Fuentes: DOC-01#F205, DOC-01#F207, DOC-01#F212 · Preguntas: P-036, P-039 · Iteración: 1

RF-055

IF a provider was inactivated after a treatment was completed, THEN the Voucher Management System SHALL allow submission of the claim for that earlier treatment.

EARS · shall (obligatorio) · Fuentes: DOC-01#F204, DOC-01#F206 · Preguntas: P-022 · Iteración: 1

RF-056

the Voucher Management System SHALL maintain each provider's cash or bank-transfer payment mode, bank name and account, monthly or twice-per-calendar-month payment frequency, and effective-dated numeric initial-consultation, first-follow-up, second-follow-up and initial-visit laboratory fees defaulting to zero.

EARS · shall (obligatorio) · Fuentes: DOC-01#F116, DOC-01#F208, DOC-01#F209 · Preguntas: P-028, P-029, P-030, P-036 · Iteración: 1

RF-057

WHEN maintaining or applying provider fees and drug prices, the Voucher Management System SHALL reject overlapping effective periods, select rates effective on the treatment date and recalculate affected accepted claims after retrospective rate changes.

EARS · shall (obligatorio) · Fuentes: DOC-01#F209, DOC-01#F248, DOC-01#F249, DOC-01#F254 · Preguntas: P-028 · Iteración: 1

RF-058

the Voucher Management System SHALL provide users with the ability to view a selected provider's claims by claim number, claim date, system-entry date, amount, status and remarks.

EARS · shall (obligatorio) · Fuentes: DOC-01#F213, DOC-01#F215 · Iteración: 1

RF-059

WHEN creating provider staff, the Voucher Management System SHALL record provider, staff name, staff type and optional qualification and generate a staff code from the provider code, SC and a numeric suffix of [TBD] length.

EARS · shall (obligatorio) · Fuentes: DOC-01#F216, DOC-01#F218, DOC-01#F219, DOC-01#F220 · Iteración: 1

RF-060

IF a provider staff name already exists, THEN the Voucher Management System SHALL warn the user and allow the new staff record to be saved.

EARS · shall (obligatorio) · Fuentes: DOC-01#F216 · Iteración: 1

RF-061

WHEN receiving a provider's claim submission, the Voucher Management System SHALL record the provider, current submission date, numeric stated and physically received form counts and each received treatment-form number and check that the number of listed forms equals the physically received count.

EARS · shall (obligatorio) · Fuentes: DOC-01#F081, DOC-01#F221, DOC-01#F224, DOC-01#F225, DOC-01#F227, DOC-01#F229 · Preguntas: P-031 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-062

IF a provider's stated form count differs from the physically received count, THEN the Voucher Management System SHALL allow receipt with a documented discrepancy and prevent acceptance or payment of affected claims until missing or extra forms are investigated.

EARS · shall (obligatorio) · Fuentes: DOC-01#F228, DOC-01#F229 · Preguntas: P-031 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-063

WHEN a claim submission is recorded, the Voucher Management System SHALL produce a printable receipt with the provider, submission date and time, stated and received counts and individual treatment-form numbers.

EARS · shall (obligatorio) · Fuentes: DOC-01#F229, DOC-01#F230, DOC-01#F231 · Preguntas: P-031 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-064

WHEN a treatment form is received, the Voucher Management System SHALL log its receipt and associate its paper form number with the submission before processing it as a claim.

EARS · shall (obligatorio) · Fuentes: DOC-01#F222, DOC-01#F224, DOC-01#F232, DOC-01#F233 · Preguntas: P-017, P-023 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-065

IF a received treatment form is incomplete or contains apparently false information, THEN the Voucher Management System SHALL mark it rejected and quarantined, record the reason and prevent acceptance of a claim from that submission.

EARS · shall (obligatorio) · Fuentes: DOC-01#F114, DOC-01#F233, DOC-01#F234, DOC-01#F246, DOC-01#F247 · Preguntas: P-023 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-066

WHEN an authorized reviewer processes a corrected rejected treatment form in the following month's batch, the Voucher Management System SHALL permit resubmission under the same form number while retaining the previous rejection and new submission.

EARS · shall (obligatorio) · Fuentes: DOC-01#F115 · Preguntas: P-017, P-023 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-067

WHILE a claim is not accepted, the Voucher Management System SHALL exclude it from payable claims.

EARS · shall (obligatorio) · Fuentes: DOC-01#F114, DOC-01#F246 · Preguntas: P-023, P-030 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-068

WHEN selecting a received treatment-form number not yet entered for that submission, the Voucher Management System SHALL generate a claim number using an eight-digit number and hospital-code suffix and populate the submission date and provider from the form receipt.

EARS · shall (obligatorio) · Fuentes: DOC-01#F232, DOC-01#F242, DOC-01#F243 · Preguntas: P-017, P-018, P-023 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-069

the Voucher Management System SHALL capture each claim's treatment-form number, claim number, submission and treatment dates, provider, voucher number, visit type, patient type, patient name, age, gender, address, optional contact number, doctor, conditional doctor's notes, conditional HIV details, patient status, calculated claim amount and claim status.

EARS · shall (obligatorio) · Fuentes: DOC-01#F235, DOC-01#F236, DOC-01#F237, DOC-01#F240, DOC-01#F243 · Preguntas: P-016, P-018, P-020, P-028 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-070

IF a required claim-header field is missing, THEN the Voucher Management System SHALL prevent acceptance, with contact number optional, doctor's notes required only when clinically indicated and HIV details required only when such information exists.

EARS · shall (obligatorio) · Fuentes: DOC-01#F240, DOC-01#F243 · Preguntas: P-018, P-020 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-071

WHEN entering a claim, the Voucher Management System SHALL offer dropdown selections for patient profiles, medicine costs, male or female gender, maintainable address values and doctors from the provider's staff records.

EARS · shall (obligatorio) · Fuentes: DOC-01#F026, DOC-01#F027, DOC-01#F243 · Iteración: 1

RF-072

the Voucher Management System SHALL maintain selectable masters for syndromes, clinical examinations, diagnoses, laboratory tests, other measures, patient statuses, claim statuses, referral reasons and claim quarantine or rejection reasons.

EARS · shall (obligatorio) · Fuentes: DOC-01#F244, DOC-01#F245, DOC-01#F247, DOC-01#F254, DOC-01#F255 · Preguntas: P-019, P-024 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-073

the Voucher Management System SHALL maintain a drugs master with generic name, drug code, drug name and one treatment-date-effective reimbursable retail price per drug for all providers.

EARS · shall (obligatorio) · Fuentes: DOC-01#F248, DOC-01#F249, DOC-01#F254, DOC-01#F255 · Preguntas: P-027, P-028 · Iteración: 1

RF-074

the Voucher Management System SHALL maintain the approved TA-OBA treatment matrix by syndrome and visit with [TBD] clinical content and permit acceptance of a deviating claim while recording its justification under [TBD] deviation rules.

EARS · shall (obligatorio) · Fuentes: DOC-01#F069, DOC-01#F239, DOC-01#F255, DOC-01#F256 · Preguntas: P-019, P-024 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-075

WHEN entering an initial-consultation claim, the Voucher Management System SHALL permit syndrome, clinical examination, diagnosis, laboratory test, drug name, frequency, number of days, quantity and other-measure details supported by the approved treatment matrix.

EARS · shall (obligatorio) · Fuentes: DOC-01#F239 · Preguntas: P-019, P-024 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-076

WHEN entering a follow-up claim, the Voucher Management System SHALL allow diagnosis and drug name, frequency, days and quantity together with multiple syndromes, examinations, laboratory tests, drugs and other measures where the approved matrix supports them, requiring only the fields specified for that syndrome and visit.

EARS · shall (obligatorio) · Fuentes: DOC-01#F239, DOC-01#F255 · Preguntas: P-019, P-024 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-077

the Voucher Management System SHALL support one initial consultation and at most two ordered follow-ups separately for the client and partner under the same voucher number.

EARS · shall (obligatorio) · Fuentes: DOC-01#F106, DOC-01#F108, DOC-01#F140, DOC-01#F141, DOC-01#F142 · Preguntas: P-004, P-014 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-078

IF a claim repeats a visit or is out of visit order for the same voucher and patient type, THEN the Voucher Management System SHALL reject it.

EARS · shall (obligatorio) · Fuentes: DOC-01#F108, DOC-01#F140, DOC-01#F141, DOC-01#F142 · Preguntas: P-014, P-017 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-079

WHEN validating a follow-up visit, the Voucher Management System SHALL apply [TBD] follow-up interval and provider-change rules.

EARS · shall (obligatorio) · Fuentes: DOC-01#F108, DOC-01#F109 · Preguntas: P-014 · Iteración: 1

RF-080

the Voucher Management System SHALL identify a unique payable claim by voucher number, patient type and visit while using the treatment-form number to identify its paper form and preventing a second accepted claim for that visit.

EARS · shall (obligatorio) · Fuentes: DOC-01#F110, DOC-01#F123, DOC-01#F236, DOC-01#F237 · Preguntas: P-016, P-017 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-081

WHEN assessing claim eligibility, the Voucher Management System SHALL accept a claim only if its voucher was sold, not returned or withheld, valid on the treatment date and without an accepted claim for that patient and visit, quarantining other non-paid-duplicate eligibility failures for review.

EARS · shall (obligatorio) · Fuentes: DOC-01#F114, DOC-01#F123, DOC-01#F134, DOC-01#F148, DOC-01#F191, DOC-01#F246 · Preguntas: P-007, P-008, P-016, P-017 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-082

IF a duplicate claim for the same voucher, patient type and visit has already been paid, THEN the Voucher Management System SHALL reject the duplicate.

EARS · shall (obligatorio) · Fuentes: DOC-01#F110, DOC-01#F246 · Preguntas: P-016, P-017 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-083

WHEN a claim records a referral, the Voucher Management System SHALL capture its destination and reason selected from the referral-reason master.

EARS · shall (obligatorio) · Fuentes: DOC-01#F109, DOC-01#F244, DOC-01#F245 · Preguntas: P-015 · Iteración: 1

RF-084

IF a referral destination is outside the approved service-provider network, THEN the Voucher Management System SHALL require its name, location and referral reason and exclude that destination's treatment from voucher reimbursement.

EARS · shall (obligatorio) · Fuentes: DOC-01#F109, DOC-01#F245 · Preguntas: P-015 · Iteración: 1

RF-085

WHEN calculating a claim, the Voucher Management System SHALL use the approved treatment matrix as authoritative over a conflicting provider-fee and drug-price amount while applying [TBD] consultation, laboratory, drug-component and discrepancy rules.

EARS · shall (obligatorio) · Fuentes: DOC-01#F248, DOC-01#F249, DOC-01#F256 · Preguntas: P-024, P-025 · Iteración: 1

RF-086

WHEN calculating an initial-consultation claim, the Voucher Management System SHALL include one contracted laboratory fee if one or more tests were actually performed and no laboratory fee otherwise.

EARS · shall (obligatorio) · Fuentes: DOC-01#F248 · Preguntas: P-026 · Iteración: 1

RF-087

WHEN processing a paper treatment claim, the Voucher Management System SHALL capture and compare its patient's thumbprint with earlier prints for the same voucher and patient type using a [TBD] digitization and comparison procedure.

EARS · shall (obligatorio) · Fuentes: DOC-01#F038, DOC-01#F195, DOC-01#F249, DOC-01#F250 · Preguntas: P-021, P-022 · Iteración: 1

RF-088

IF a claim's thumbprint is unreadable, an earlier print is unavailable or the thumbprint reader is unavailable, THEN the Voucher Management System SHALL place that claim on hold.

EARS · shall (obligatorio) · Fuentes: DOC-01#F038, DOC-01#F249 · Preguntas: P-021 · Iteración: 1

RF-089

WHEN a thumbprint mismatch for a voucher and patient type is confirmed, the Voucher Management System SHALL count it in the provider's all-time event total.

EARS · shall (obligatorio) · Fuentes: DOC-01#F250, DOC-01#F251 · Preguntas: P-022 · Iteración: 1

RF-090

WHEN a confirmed claim irregularity belongs to [TBD] fraud-event categories, the Voucher Management System SHALL count it together with thumbprint mismatches in the provider's all-time event total.

EARS · shall (obligatorio) · Fuentes: DOC-01#F206, DOC-01#F250, DOC-01#F251 · Preguntas: P-022 · Iteración: 1

RF-091

IF a provider's all-time total of counted fraud events and thumbprint mismatches exceeds two, THEN the Voucher Management System SHALL automatically inactivate that provider.

EARS · shall (obligatorio) · Fuentes: DOC-01#F206, DOC-01#F250, DOC-01#F251 · Preguntas: P-022 · Iteración: 1

RF-092

the Voucher Management System SHOULD BE ABLE TO display a warning when a provider's counted thumbprint mismatches exceed two.

MASTeR · should (recomendable) · Fuentes: DOC-01#F251 · Preguntas: P-022 · Iteración: 1

RF-093

the Voucher Management System SHALL provide authorized users with the ability to amend claim information.

EARS · shall (obligatorio) · Fuentes: DOC-01#F252 · Preguntas: P-036, P-039 · Iteración: 1

RF-094

WHEN preparing provider payment information, the Voucher Management System SHALL calculate accepted claims and produce financial and medical payment reports for MSIU without initiating provider payments.

EARS · shall (obligatorio) · Fuentes: DOC-01#F082, DOC-01#F116, DOC-01#F209, DOC-01#F211 · Preguntas: P-025, P-030 · Iteración: 1

RF-095

WHEN preparing provider claim-submission and payment reports, the Voucher Management System SHALL distinguish monthly from twice-per-calendar-month providers using [TBD] submission and payment period boundaries and cutoffs.

EARS · shall (obligatorio) · Fuentes: DOC-01#F116, DOC-01#F209, DOC-01#F221 · Preguntas: P-029, P-030 · Iteración: 1

RF-096

WHEN capturing client feedback, the Voucher Management System SHALL associate its voucher number, client or partner patient type and selected visit with the feedback record.

EARS · shall (obligatorio) · Fuentes: DOC-01#F265, DOC-01#F266 · Preguntas: P-032 · Iteración: 1

RF-097

WHEN a feedback patient and visit are selected, the Voucher Management System SHALL populate the corresponding claim's patient address, treated syndromes, laboratory tests, drugs and referral without allowing changes to those treatment details and derive partner-treated status from an accepted partner claim.

EARS · shall (obligatorio) · Fuentes: DOC-01#F265, DOC-01#F266 · Preguntas: P-032, P-039 · Iteración: 1

RF-098

WHEN capturing feedback, the Voucher Management System SHALL record client-reported treatment success using [TBD] response values and the client's treatment, counseling and privacy satisfaction using Not at all, Moderate, Good or Completely.

EARS · shall (obligatorio) · Fuentes: DOC-01#F265, DOC-01#F266 · Preguntas: P-032, P-033 · Iteración: 1

RF-099

WHILE entering a distribution, provider, provider-staff or claim record, the Voucher Management System SHALL allow a missing applicable distributor, salesperson, geographic, facility or staff-type master value to be added and resume the active entry without closing it.

EARS · shall (obligatorio) · Fuentes: DOC-01#F183, DOC-01#F200, DOC-01#F201, DOC-01#F202, DOC-01#F220, DOC-01#F243 · Iteración: 1

RF-100

the Voucher Management System SHALL permit deletion of entered non-voucher records according to [TBD] record-type, user-group and post-finalization rules.

EARS · shall (obligatorio) · Fuentes: DOC-01#F148, DOC-01#F266 · Preguntas: P-036, P-039 · Iteración: 1

RF-101

the Voucher Management System SHALL provide only the system administrator with the ability to create user groups recording a group code, unique group name and per-screen new, edit, delete, view and print permissions.

EARS · shall (obligatorio) · Fuentes: DOC-01#F271, DOC-01#F272, DOC-01#F273, DOC-01#F274, DOC-01#F275 · Preguntas: P-036 · Iteración: 1

RF-102

WHEN a user requests a screen action, the Voucher Management System SHALL apply that user's group-level new, edit, delete, view or print permission, with the groups and record-specific assignments [TBD].

EARS · shall (obligatorio) · Fuentes: DOC-01#F034, DOC-01#F143, DOC-01#F271, DOC-01#F272, DOC-01#F273, DOC-01#F274 · Preguntas: P-036 · Iteración: 1

RF-103

WHEN creating a user under a selected user group, the Voucher Management System SHALL require a user name, password and verification entry and reject creation unless password and verification match.

EARS · shall (obligatorio) · Fuentes: DOC-01#F275 · Preguntas: P-036, P-038 · Iteración: 1

RF-104

IF a proposed user-group name or individual user name already exists, THEN the Voucher Management System SHALL reject creation with that name.

EARS · shall (obligatorio) · Fuentes: DOC-01#F275 · Preguntas: P-036 · Iteración: 1

RF-105

the Voucher Management System SHALL produce monthly post-collection reports of clean claims payable without reservation and claims whose payment is withheld pending clarification.

EARS · shall (obligatorio) · Fuentes: DOC-01#F267 · Preguntas: P-023, P-030, P-035 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RF-106

the Voucher Management System SHALL produce a claim report for each provider and a summary claim report for all providers.

EARS · shall (obligatorio) · Fuentes: DOC-01#F267, DOC-01#F268 · Preguntas: P-035 · Iteración: 1

RF-107

the Voucher Management System SHALL produce quarterly summary reports for each provider and all providers combined.

EARS · shall (obligatorio) · Fuentes: DOC-01#F268 · Preguntas: P-035 · Iteración: 1

RF-108

the Voucher Management System SHALL report frequencies of treated syndromes and patient sex and age.

EARS · shall (obligatorio) · Fuentes: DOC-01#F268 · Preguntas: P-035 · Iteración: 1

RF-109

the Voucher Management System SHALL report frequencies of primary clients and notified partners.

EARS · shall (obligatorio) · Fuentes: DOC-01#F268 · Preguntas: P-035 · Iteración: 1

RF-110

the Voucher Management System SHALL report documentation quality, algorithm adherence, justified treatment alterations, treatment errors, comparisons of providers and quarterly and half-yearly trends for individual providers and all providers using [TBD] sources, indicator definitions, calculation rules, periods and comparison methods.

EARS · shall (obligatorio) · Fuentes: DOC-01#F268 · Preguntas: P-034, P-035 · Iteración: 1

Requisitos no funcionales (9)

RNF-001

WHEN printing reports, the Voucher Management System SHALL mask patient identity, HIV information and thumbprints.

EARS · shall (obligatorio) · Fuentes: DOC-01#F267, DOC-01#F268, DOC-01#F270 · Preguntas: P-037 · Iteración: 1

RNF-002

the Voucher Management System SHALL apply [TBD] confidentiality and access restrictions, access-and-change audit logging, retention periods and disposal rules to patient identity, HIV information and thumbprints.

EARS · shall (obligatorio) · Fuentes: DOC-01#F030, DOC-01#F031, DOC-01#F033, DOC-01#F034, DOC-01#F237, DOC-01#F249 · Preguntas: P-036, P-037 · Iteración: 1

RNF-003

the Voucher Management System SHALL enforce [TBD] password-strength rules, failed-login threshold and lockout duration, verified password-reset procedure and idle-session timeout.

EARS · shall (obligatorio) · Fuentes: DOC-01#F033, DOC-01#F143, DOC-01#F275 · Preguntas: P-038 · Iteración: 1

RNF-004

The intrusion-control level of the Voucher Management System SHALL BE [TBD].

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F033, DOC-01#F034 · Preguntas: P-037 · Iteración: 1

RNF-005

The interactive response time of the Voucher Management System SHALL BE [TBD] seconds for the pilot and [TBD] seconds for later expansion.

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F028, DOC-01#F032, DOC-01#F102 · Preguntas: P-001, P-040 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RNF-006

The standard-report generation time of the Voucher Management System SHALL BE [TBD] seconds for the pilot and [TBD] seconds for later expansion.

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F032, DOC-01#F102, DOC-01#F267, DOC-01#F268 · Preguntas: P-001, P-040 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RNF-007

The availability of the Voucher Management System SHALL BE [TBD] percent for the pilot and [TBD] percent for later expansion.

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F102 · Preguntas: P-040 · Iteración: 1

RNF-008

The concurrent-user capacity of the Voucher Management System SHALL BE [TBD] users for the pilot and [TBD] users for later expansion.

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F102 · Preguntas: P-040 · Iteración: 1

RNF-009

The daily and peak transaction capacity of the Voucher Management System SHALL BE [TBD] transactions per day and [TBD] per peak period for the pilot, and [TBD] transactions per day and [TBD] per peak period for later expansion.

MASTeR · shall (obligatorio) · Fuentes: DOC-01#F102 · Preguntas: P-040 · Iteración: 1

Requisitos de integración (2)

RI-001

WHEN a voucher visit slip is scanned for claim entry or voucher verification, the Voucher Management System SHALL interface with the barcode reader to capture its voucher number, patient type and visit type.

EARS · shall (obligatorio) · Fuentes: DOC-01#F036, DOC-01#F037, DOC-01#F243 · Preguntas: P-004, P-005 · Iteración: 1

Suposición de la IA: cita una pregunta respondida con una suposición de la IA aceptada sin cambios.

RI-002

the Voucher Management System SHALL interface with a thumbprint reader for claim-form verification.

EARS · shall (obligatorio) · Fuentes: DOC-01#F038, DOC-01#F249 · Preguntas: P-021 · Iteración: 1

Requisitos técnicos (1)

RT-001

the Voucher Management System SHALL use Oracle 9i for its database, Visual Basic for its front end and Crystal Reports 9 for reporting.

EARS · shall (obligatorio) · Fuentes: DOC-01#F026 · Iteración: 1

Anexo A. Fuentes citadas

DOC-01 · microcare.pdf

DOC-01#F026 (1.1) System Development: The system will be developed on Oracle 9i platform Front end will be VB (visual basic) Reports will be crystal reports 9 System design: The system will be user friendly with maximum master table structure with all transaction screens to have drop down selection menus to minimize data entry errors.

DOC-01#F027 (1.1) The main data entry screen on claims entry to have drop drown menu from patient's profile selection to medicine cost to have drop down.

DOC-01#F028 (1.1) Minimize the use of key board for any number entry to have a faster transaction data entry.

DOC-01#F030 (1.1) Storage efficiency: The structural design of the database will have sequential links with surrogate keys.

DOC-01#F031 (1.1) The database storage will be highly efficient to manage and avoid empty unused spaced blocked, properly defragmenter on a periodic basis.

DOC-01#F032 (1.1) This efficiency will have a maximum provision to expand this program beyond the pilot period, if the program requirements remain same.

DOC-01#F033 (1.1) Security: High intrusion controls will be in place in the system and the database.

DOC-01#F034 (1.1) Access level controls, various organizational level user setting by including granular model setting.

DOC-01#F036 (1.1) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 4 of 33 Bar-code – the system will interface with the bar-code reader to interface all transaction details.

DOC-01#F037 (1.1) E.g. voucher number verifications, claim form entry and selection of voucher usage by the clients.

DOC-01#F038 (1.1) Bio-metrics – the system will interface with the thumb-print reader for verifying claims form used by the clients.

DOC-01#F050 (1.3) These vouchers will be refunded to service providers in the private sector (medical doctors, qualified nurses and midwives), government hospitals, NGOs, and faith-based organisations.

DOC-01#F055 (1.3) Objective of the OBA Programme in Uganda is to provide Quality health care services for STD treatment, For the sexually active population of the Mbarara district, Through a voucher system, By qualified, approved providers, For a pilot phase of 1 year.

DOC-01#F058 (1.3) The VMU establishes a network of approved providers (during the pilot phase private, NGO, FBO providers) throughout Mbarara District.

DOC-01#F064 (1.3) The voucher may only be bought for personal treatment or for the treatment of the partner.

DOC-01#F065 (1.3) Only one voucher is sold at time.

DOC-01#F066 (1.3) The option of selling more than one voucher to a person at a time introduces too many sources for fraud.

DOC-01#F067 (1.3) Distributors keep a distribution list documenting distributor, voucher number, date, place of sale, and name and place of living of the customer.

DOC-01#F069 (1.3) STD treatment according to the National Treatment Algorithms for STD in Uganda (NTA), adapted for this voucher scheme (TA-OBA, treatment algorithms for STD treatment in the OBA scheme), is given to clients for free for the syndromes of

DOC-01#F081 (7.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 8 of 33 The standardised patient treatment documentation form for each patient and A summary claims form containing a summary of all treated voucher cases to the VMU for reimbursement. The data from the forms is entered into a computer database.

DOC-01#F082 (7.) Data checks and plausibilisations are done. Clean claims will be reimbursed via bank transfer. Conspicuous claims will be investigated and cleared by the VMU. The VMU operates a monitoring system including follow-up with patients to monitor proper operation of the voucher scheme.

DOC-01#F102 (2.1) During the system study, it was understood that the first pilot period, twenty thousand vouchers will be sold, but the VMU-system has the provision to upgrade to meet the additional market and projects needs.

DOC-01#F105 (2.1.1) The distributor will submit the sales details back to the VMU.

DOC-01#F106 (2.1.1) Each voucher should have two portions with three tear off voucher slips each for Client and Partner.

DOC-01#F108 (2.1.1) First visit is called as Consultation and if the patient is not cured then they can go for first follow up and second follow up,

DOC-01#F109 (2.1.1) If the patient is not cured then the doctor will refer the patient to some other Hospitals the hospital may be another VSP or any other.

DOC-01#F110 (2.1.1) Each visit details (including Diagnosis, Lab Test and Drugs) of the patient is called a claim,

DOC-01#F114 (2.1.1) If any of mandatory information is missed or any false information is existing then the field office will reject the claim back to VSP and the system will keep those claim in a quarantine area.

DOC-01#F115 (2.1.1) The quarantined forms will be sent back to the VSP for verification, if the VSP returns the claim with satisfactory details, the claims will be entered on to the system, in the following month’s batch.

DOC-01#F116 (2.1.1) Based on the payment terms agreed by VSP, the field office will generate Bi- Month or Monthly financial and medical report and send it to MSIU Admin team to arrange the payments for the VSP.

DOC-01#F121 (1.) Voucher creation – the voucher numbers are system generated and created with unique identification numbers with security protocols in-built.

DOC-01#F122 (1.) The created unique numbers are then printed out in the form of bar-codes, which will complement (or stuck on the voucher) the voucher.

DOC-01#F123 (1.) Then at every level on the voucher cycle this number is captured, on distribution, retail sales, point of treatment, enclosed along with claim forms, at the claims processing and finally for the payment.

DOC-01#F125 (1.) Each voucher should have the following properties, which will have sub-elements to get the batch numbers, voucher numbers, and the project codes.

DOC-01#F126 (1.) Project code – Group batch code – Batch number – Voucher number – Security code.

DOC-01#F127 (1.) Project Code (2 Digit) Example: P001

DOC-01#F128 (1.) Group Batch (3 Digit) each group batch has a batch of 100 Batches Example: GP0001 Copyright © 2005 by Microcare Ltd

DOC-01#F130 (1.) Batch number (2 Digit) approximately each batch will have 10 vouchers

DOC-01#F131 (1.) Voucher number (10 digit)

DOC-01#F132 (1.) Security Code

DOC-01#F133 (1.) All codes will be printed out in the form of Bar

DOC-01#F134 (1.) Additionally the provision for validity date check for the period of vouchers to be used in the program is provided.

DOC-01#F135 (1.) This validity date can be amended or altered at the system level ONLY by the authorized user.

DOC-01#F136 (1.) Voucher will also have MRP (maximum retail price)

DOC-01#F137 (1.) Voucher should have three tear off portioned slips with a sub-section tear-off for the partner.

DOC-01#F139 (1.) Each voucher slip should contain the bar code of the Voucher with two identifications one for the client and the other for the partner.

DOC-01#F140 (1.) The first tear for the first consultation

DOC-01#F141 (1.) Second one for the first follow-up

DOC-01#F142 (1.) And the third tear off for the final (second follow-up).

DOC-01#F143 (1.) Design Constraints This system has high security feature as far as the user access to the system, including all the modules, sub-modules and even at the screen level.

DOC-01#F144 (1.) The voucher will be created ONLY by the authorized person.

DOC-01#F145 (1.) The will be a provision to create a minimum quantity of vouchers at one time (such minimum numbers will be decided by the management team).

DOC-01#F148 (1.) Once created vouchers will not be edited or deleted but there will be a provision to with-hold any voucher number if the admin team decides to do for any reason.

DOC-01#F149 (1.) There will be a provision to amend the validity date of the voucher.

DOC-01#F150 (2.) Marketing / Sales

DOC-01#F153 (2.) Distributor Master Information The system will capture the master details of

every distributor so that the users can get the details of any distributor and sales details at any time.

DOC-01#F154 (2.) Each distributor will have unique code and detailed descriptions such as name, address, locations and type of business etc. such valid information will help us track information related to sales and distributions.

DOC-01#F155 (2.) Following fields will be captured at this master. o Distributor Code (3 Digit) Example: DS0001* o Name of the distributor* o Type of business (e.g. hospital/pharmacy/NGO)* o Proprietor Name* o Designation o Address (Street/Road, Sub District, County, Sub County and Village or Town)* o Contact No o Email Id o Status (active/deactivate) Copyright © 2005 by Microcare Ltd

DOC-01#F156 (2.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 13 of 33 All fields with * are mandatory!

DOC-01#F157 (2.) Design Constraints The address field will capture the geographical location of the distributor, such as District, Sub-District, County, Sub-County or Village / Town, road or street.

DOC-01#F158 (2.) All the level of details will have a master table in order to update as per the program requirements.

DOC-01#F159 (2.) The system will check the duplicated ID for the distributors.

DOC-01#F160 (2.) The system can allow the duplicate names of the Distributor.

DOC-01#F161 (2.) On capture of any duplicate name the system will give a warning message to have the duplicate name or to change the name.

DOC-01#F163 (2.) System will have a provision to print the distributor master details.

DOC-01#F164 (2.) The distributor screen will have a provision to view the Sales History of a particular distributor with following summary details.

DOC-01#F165 (2.) Distributor Name as Report Header and following as the report footer o Batch No o Date of purchase o Qty Purchase o Qty Sold o Qty Returned o Balance Qty (any other details required by the MSIU office) There will be a provision to select a particular distributor to view the details (e.g. sales) by double clicking on the grid.

DOC-01#F166 (2.) Print option of above report is based on User Login Permission only.

DOC-01#F167 (2.) There will be an option for doing the following at every screen.

DOC-01#F168 (2.) New (adding new records) Edit (updating available records) Delete (deleting will be allowed only if no child records are created) Copyright © 2005 by Microcare Ltd

DOC-01#F169 (2.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 14 of 33 Active/Deactivate (if the distributor has to be deactivated or terminated) There will also be a provision for the other users to view the details of a distributor with purchase and sales details. ii.

DOC-01#F170 (2.) MSIU Sales Team Information Master The system will capture the details of MSIU Salesman; this would help the MSIU management team to understand the performance of each Team or salesman.

DOC-01#F171 (2.) During every distribution transaction the user should select the name of the sales man listed from Team Master.

DOC-01#F172 (2.) The Salesman master should capture following information's. o Salesman Code* o Name of the Salesman* o DOB & Age* o Gender* o Communication Address* o Contact No o E-Mail Id o Sales-team (which will have a separate master)*.

DOC-01#F173 (2.) The sales team master is for the future development of this program, if this program is extended to a country-wide network, this master will help understand and tack sales information.

DOC-01#F174 (2.) Design Constraints The system will check the duplicated ID for the salesman and team.

DOC-01#F175 (2.) The system can allow the duplicate names of the salesman.

DOC-01#F176 (2.) On capture of any duplicate name the system will give a warning message to have the duplicate name or to change the name.

DOC-01#F179 (2.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 15 of 33 The system will capture the details of voucher sales between MISU sales team and Distributors.

DOC-01#F180 (2.) During the distribution the system will capture the following details, to make Distribution process easily.

DOC-01#F181 (2.) With the below details the user can get the details of Distributor-wise and Salesman-wise and Batch No wise sales details as reports. o Name of the distributor* o Name of the Sales Man* o Date of distribution* o No of vouchers sold* o According to the number of vouchers required by the distributor, the system should allocate the relevant vouchers with their numbers and batch numbers based on the stock. o Invoice amount = No of vouchers x Wholesale price o Mode of payment is Cash Design Constraints The mandatory information required during a distribution transaction is mentioned below. o Name of the distributor (Selecting from Distributor Master) o Name of the Sales Man (Selecting from Sales man master) o Date of Distribution (Date selection option) o Required Qty (No of vouchers sold (Allow only Numeric Entry)) o Invoice Amount = Whole Sale Rate (should taken from settings master based on sale date) * Qty Sold.

DOC-01#F182 (2.) (Automatic Calculation) The system will generate an auto-generated number as Distribution Invoice No.

DOC-01#F183 (2.) Suppose the distributor or salesman name is not available in the system, then the system has a provision to navigate quickly to its master screen and enter the new Distributor and Salesman details, without closing the present screen.

DOC-01#F184 (2.) While entering the No of vouchers required, the system should automatically pick the Batch No's with voucher No's from the available voucher stock and list the details of each voucher with below information's as a grid format.

DOC-01#F186 (2.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 16 of 33 o Batch No o Voucher No o Validity Date The date of distribution will be current (system) date.

DOC-01#F187 (2.) But the date of sale can be the past dates.

DOC-01#F188 (2.) There will be a future date sale validation check available.

DOC-01#F191 (3.) In this module you will see that every capture of data will be validated and checked on saving into the database.

DOC-01#F195 (3.) The division of sub-module is purely based on the sub-level categories of the data information. – The service (treatment) will happen at the VSP (Service Provider) clinic or hospital – The attending doctor will fill the claims form. – On completion of the service the patient will provide the voucher according to the visit type and patient type (client or partner), the voucher will be stuck to the claim form. – The thumb print will also be placed on completion of the service. – The VSP will send the collected claim forms monthly and send it to MSIU field office. – MSIU office will then process the claim. i.

DOC-01#F196 (3.) Voucher Service Provider (VSP) Master Information The VSP master will have the following information: o VSP Code o Providers Name Copyright © 2005 by Microcare Ltd

DOC-01#F197 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 17 of 33 o Physical Address (Street / Road, District, Sub-District, County, Sub-County, Village/Town) o Communication Address (Street / Road, District, Sub-District, County, Sub-County, Village/Town) o Health Sub-District o Locality o Level Of Facility o Type of facility o Registration Body o Contact Person o Designation o Contact No o E-Mail id o Status (Active / In-Active) Design Constraints Other than Contact No and E-Mail Id all other information are mandatory during the creation of a new Service Provider.

DOC-01#F198 (3.) The VSP code is a digit code with suffix SP, would be automatically generated by the system.

DOC-01#F199 (3.) The system should generate message with two option “Continue – Yes/No” while the user trying to create a new VSP with an existing name, If the user press Yes the system will allow the user to enter the same, if not the system wont allow the new entry to save.

DOC-01#F200 (3.) The system will list District, Sub-District, County, Sub-County, Village / Town from the master during VSP creation, if any of them are not available in the system, then the system will have the provision to navigate quickly to its master screen and do enter master details and back to VSP screen.

DOC-01#F201 (3.) The values of Health Sub – District, Locality, Level Of Facility, Type of facility, Registration Body would be list from their own master and should select the details based on the VSP.

DOC-01#F202 (3.) If any of the information is not available in existing master of above, then the system will have the provision to navigate quickly to its form to enter the master details and back to VSP Screen.

DOC-01#F204 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 18 of 33 The system will populate Active VSP only on other screen during data entry process, but the system will also populate all VSP for report purpose.

DOC-01#F205 (3.) Activation and In-activation of VSP is purely based on the MSIU Management decision.

DOC-01#F206 (3.) But if the system is found more than two fraud entries during the claim

process of particular VSP, then the system would automatically change the status of that particular VSP as In-activate.

DOC-01#F207 (3.) Activation of that particular VSP is again purely based on MSIU Management decision.

DOC-01#F208 (3.) The VSP Master Information screen should have a provision to enter the payment terms agreed between MSIU and VSP.

DOC-01#F209 (3.) The system will capture following master details to fill the payment terms. o Payment Mode (Cash / Bank) o Bank Account No o Bank Name o Payment Type (Selection from list of options Bi-Monthly/Monthly) The below details may periodically change depends on the MSIU management decision. o Valid From (Date selection option) o Valid up to (Date selection option) o First Visit Consultation Fee (Only Numeric Entry, default 0) o First follow up visit Consultation Fee (Only Numeric Entry, default 0) o First second up visit Consultation Fee (Only Numeric Entry, default 0) o First visit Lab Fee (Only Numeric Entry, default 0) The above mentioned payment terms will help the MSIU to make the payment detail easy and also help the VSP to get their payment in time.

DOC-01#F211 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 19 of 33 The system will control the payment process and terms.

DOC-01#F212 (3.) The allowed users only can able to Add, Modify or delete the VSP master information including payment terms.

DOC-01#F213 (3.) The VSP screen will have the provision to view the Claim Status of selected VSP.

DOC-01#F215 (3.) VSP Name (as the report header and below as the details part of report) Claim No Date Date of System Entry Amount Status Remarks Cumulative Total Amount will show in Report footer for the previous payment done. ii.

DOC-01#F216 (3.) VSP Staff Master Information The system will have the facility to capture the details of VSP staff details and the necessary master information while entering the claim into the system. o VSP Name o Staff Code o Staff Name o Staff Type o Qualification Design Constraints The system will generate message while creating a new staff with existing name, but the system will allow the user to save that new staff if its required.

DOC-01#F218 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 20 of 33 All above information’s other than Qualification are mandatory during the creation of new staff under any VSP.

DOC-01#F219 (3.) The system will automatically create Staff Code with Suffix as VSP Code + SC + 3 digit.

DOC-01#F220 (3.) For example HP0001SC0001 Staff type (should be select from list of staff type listing from Staff Type Master) If any of the staff type is not available in the system, then the system should have the provision to navigate quickly to staff type master to enter the new staff type and then back to Staff Master screen. iii.

DOC-01#F221 (3.) Claim (Treatment Form) Submission Depends on the payment terms (Bi-monthly / Monthly) mentioned in the VSP master the VSP should submit the Claim (Treatment form) to the MISU Field office.

DOC-01#F222 (3.) While submitting the Claim (Treatment Form) to MSIU, the system will have the provision to capture the following details.

DOC-01#F224 (3.) VSP Name Date of submission No of Mentioned Forms No of Available Forms The above as the master part and below details are the Transaction part Treatment Form No Design Constraints During submission entry all above information's are mandatory.

DOC-01#F225 (3.) Date of submission should be current date Copyright © 2005 by Microcare Ltd

DOC-01#F227 (3.) Mentioned Forms and Available Forms only accept numeric values.

DOC-01#F228 (3.) Available forms may be less than or greater than or equal to Mentioned Forms.

DOC-01#F229 (3.) In the transaction part no of forms should match with No of Available Forms The system should print a receipt document based on the information entered during claim submission.

DOC-01#F230 (3.) The document should have the following information.

DOC-01#F231 (3.) VSP Name Date of Submission (with date and time) No of claims mentioned No of claims Available The above details would print in the report header and below details will print in the detailed part of the report Treatment Form No iv.

DOC-01#F232 (3.) Claim Entry The claim entry is purely based on the Treatment (claims) Form submitted by the VSP.

DOC-01#F233 (3.) Before the claim entry the user should check the form manually to understand whether any mandatory information is missed in the Claim or not.

DOC-01#F234 (3.) If yes, then the user should mark that Claim (Treatment Form) status as Rejected and send back to VSP.

DOC-01#F235 (3.) During the claim entry the system should capture the following information.

DOC-01#F236 (3.) Treatment Form No Claim No Copyright © 2005 by Microcare Ltd

DOC-01#F237 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 22 of 33 Submitted Date VSP Name Voucher No Visit Count Patient Type Patient Name Age Gender Address (Street / Road, District, Sub-District, County, Sub-County, Village / Town) Contact No Doctor Name Doctors Note HIV Details if any Patient Status Claim Amount Claim Status The above details are the master information and below listed information are the transaction details of a Claim.

DOC-01#F239 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 23 of 33 Syndrome Clinical Examination Diagnosis Lab Test Drugs Name – Frequency –No of days - Qty Other measure For First Follow UP Diagnosis Drugs Name – Frequency –No of days - Qty For Second Follow UP Diagnosis Drugs Name – Frequency –No of days - Qty The system will have the provision to enter any number of Syndrome, Clinical Examinations, Diagnosis, Lab Test, Drugs and Other Measures in any treatment level based on MSIU treatment master.

DOC-01#F240 (3.) Design Constraints All above master level information are mandatory other than Contact No during the entry of claim into the system.

DOC-01#F242 (3.) Treatment Form No (List Form No from Claim receipt details which all are not yet entered in claim) Claim No (The system will automatically generate the Claim number with Hospital Code as Suffix + 8 digit) Copyright © 2005 by Microcare Ltd

DOC-01#F243 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 24 of 33 Submitted Date (This should populate automatically while choosing the Form No) VSP Name (This should populate automatically while choosing the Form No) Voucher No (This should be captured from Bar Code reader based on the Voucher Slip Stick on the Claim Form) Visit Count (This should be captured from Bar Code reader based on the Voucher Slip Stick on the Claim Form) Patient Type (This should be captured from Bar Code reader based on the Voucher Slip Stick on the Claim Form) Patient Name Age Gender (Select from the list of options Male / Female) Address (Street / Road, District, Sub-District, County, Sub-County, Village / Town) other than Street / Road all other details would list from the its master records, if any details are not exist in Master record, then the system should have the provision to navigate quickly to its master screen to enter the new details and back to the Claim Entry Screen Contact No – Not Mandatory Doctor Name (select from list of doctors populating from VSP Staff Master) Doctors Note – Space for the doctor to enter the note about the patient if anything is required HIV Details if any – The format for HIV capturing details are attached with SRS.

DOC-01#F244 (3.) Patient Status - (Select from list of status options populating from Patient Status Master) suppose the status is Referral then the system will have the Copyright © 2005 by Microcare Ltd

DOC-01#F245 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 25 of 33 provision to capture Referred To and Reason for Referral, the reason for Referral should be populated from Referral master.

DOC-01#F246 (3.) Claim Status – Status of the claim is depends information available in the Claim, if any false data or any mandatory information is available in Claim, then the claims status will change, if the value of status is not “Accepted” then the claim will be stored in quarantine area and can able to precede it further from its status.

DOC-01#F247 (3.) The system should have a provision to capture the reason suppose if the claim status is “Rejection or Quarantine” Claim Amount – The calculation of claim amount is explained below.

DOC-01#F248 (3.) If it is a First visit Claim Claim Amount will capture First Visit Consultation Fee (from VSP Payment terms) + Lab test Amount (from VSP Payment terms) + (Qty of drugs * Retails Price (from Drugs Master).

DOC-01#F249 (3.) If Claim is for first follow up Claim Amount will capture First Follow up Fee (from VSP Payment terms) + (Qty of drugs * Retails Price (from Drugs Master) If Claim is for second follow up Claim Amount will capture Second Follow up Fee (from VSP Payment terms) + (Qty of drugs * Retails Price (from Drugs Master) The system captures the thump impression available in each claim form, and needs to compare it with the same voucher numbers previous visits if available.

DOC-01#F250 (3.) If the thump impression are mismatching for the same patient (Client / Partner) on same voucher the system would automatically make a count on it.

DOC-01#F251 (3.) If the claim from same VSP having more than two times of Thump

Impression mismatching, then the system should automatically produce a warning message and the same time the system should In-Activate the VSP.

DOC-01#F252 (3.) The authorized user can alter / amend the Claim if required.

DOC-01#F254 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 26 of 33 Details about Masters information required for Claim Processing Generic Master with following information Code Name Drugs Master (there will (can) be a standard drug price for all VSP provision) Generic Name Drug Code Drug Name Retail Price Syndrome Master Syndrome Code Syndrome Description Clinical Examination Master Exam Code Exam Description Diagnosis Master Diagnosis Code Diagnosis Description Lab Test Master Test Code Test Name Other Measure Master Measure Code Measure Description Patient Status Master Status Code Status Description Claim Status Master Status Code Status Description Copyright © 2005 by Microcare Ltd

DOC-01#F255 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 27 of 33 Referral Reason Master Reason Code Reason Description Claim Quarantine / Rejection Reason Master Reason Code Reason Description MSIU Treatment Matrix Syndrome First Visit Clinical Examinations First Visit Diagnosis Lab Test First Visit Drugs First Visit other measures Syndrome First follow up Diagnosis First follow up Drugs Syndrome Second follow up Diagnosis Second follow up Drugs Assumptions The VSP should follow MSI Patter for treatment The user should enter the information exactly into the system from the manual claim form The VSP staff should get the thump impression from the patient and should stick the voucher slip on the claim form System only accept claims only if the mandatory information is complete Copyright © 2005 by Microcare Ltd

DOC-01#F256 (3.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 28 of 33 System should calculate Claim Amount only based on treatment matrix

DOC-01#F258 (4.) Voucher Sales return is feature used when a distributor is planning to return the vouchers back to the MSIU sales team.

DOC-01#F259 (4.) The system will capture the following information during the sales return transaction. o Distributor Name o Sales Man Name o Sales Return Date o Sales Return Amount (No of voucher returned x whole sale rate) Number of vouchers Returned The above details are the master part and following are captured as transaction part o Batch No o Voucher No Design Constraints All above information are mandatory during the sales return.

DOC-01#F260 (4.) Distributor Name - will list from Distributor Master Sales Man Name - will list from Sales Man Master Sales Return Date – System date is default and it should be less than or equal to system date Copyright © 2005 by Microcare Ltd

DOC-01#F261 (4.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 29 of 33 While entering return vouchers details the system will check weather the returned voucher was sold to this particular Distributor or not.

DOC-01#F262 (4.) If not the system won’t accept those vouchers as return.

DOC-01#F265 (5.) The Client Feed back form should capture the following details o Voucher No o Client Details o Details of syndromes treated o Lab Test o Drugs Details o Success of Treatment o Referral To Treatment o Satisfaction of Treatment (Not at all / Moderate / Good / Completely) o Satisfaction of counseling - Enter by the user o Satisfaction of ensuring privacy –

Enter by the user o Partner Treated Design Constraints Based on the Voucher No the system will populate the following details Copyright © 2005 by Microcare Ltd

DOC-01#F266 (5.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 30 of 33 o Client Details (Address as per Claim Form will populate automatically) o Details of syndromes treated (Automatically populate from the system based on Voucher No) o Lab Test Details (Automatically populate from the system based on Voucher No) o Drugs Details (Automatically populate from the system based on Voucher No) o Success of Treatment (Automatically populate from the system based on Voucher No) o Referral To Treatment (Automatically populate from the system based on Voucher No) o Partner Treated (Treatment (Automatically populate from the system based on Voucher No) Assumptions The user should enter correct Voucher No The user will not alter any information about treatment, which is populating from the system

DOC-01#F267 (6.) Reports (Standard and Customized) o As per the MSIU Project Document named “Programme Design Study” the following reports are required. o Monthly after claim collection on clean claims to be paid without reservation o Monthly after claim collection on claims, where payment shall be withheld until clarification o Report on claims per provider Copyright © 2005 by Microcare Ltd

DOC-01#F268 (6.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 31 of 33 o Report, summarising all providers o Quarterly summary reports per provider and summarising all providers o Frequencies of syndromes treated, additional information on patient population (sex, age) o Frequencies of primary clients and notified partners o Number of correctly documented cases, cases with incorrect documentation, cases treated according to algorithms, cases with justified treatment alterations and treatment errors o Summary report comparing the different providers regarding syndromes treated, documentation quality and treatment behaviour o Quarterly and half yearly reports giving the time trends of the above- mentioned indicators for each provider and all providers combined The system has the provision to provide various analytical, medical, financial and statistical reports.

DOC-01#F270 (7.) Security and User Privileges

DOC-01#F271 (7.) The security setting of the entire system is based on User Group.

DOC-01#F272 (7.) The roles available in the system are allocated to user group.

DOC-01#F273 (7.) The user group creation would capture the following Information o Group Code o Group Name The above is the masters part information and below are the transaction part information. o Screen Name o New – Allowed / Not Allowed Copyright © 2005 by Microcare Ltd

DOC-01#F274 (7.) Software Requirement Specification for VMUS (Voucher Management Unit System) Page 32 of 33 o Edit – Allowed / Not Allowed o Delete – Allowed / Not Allowed o View – Allowed / Not Allowed o Print – Allowed / Not Allowed Design Constraints Allow above information are mandatory while creating a new User Group.

DOC-01#F275 (7.) The system admin only can able to create User Groups The system should have the provision to create any number of individual user under any user group. o Each Individual User should have the following information o Group Name (Selecting from User Group) o User Name o Password o Verify Password All the above are mandatory entry The

system should save the user information only if the Password and Verify password values are equal The system should not allow the user to create a User Group and Individual User with existing names.

Anexo B. Preguntas y respuestas

P-001 Is the first release limited to the one-year, 20,000-voucher Mbarara pilot, or must it also support later geographic expansion, higher voucher volumes and sales-team management? Which capabilities belong to each phase?

Respuesta (suposición de la IA): We propose that the first release cover the one-year Mbarara pilot and its anticipated 20,000 voucher sales, including distributor and individual salesperson tracking; it should allow later growth in geography and volume, while country-wide sales-team management belongs to a later phase.

P-002 Are government hospitals eligible to participate as approved voucher service providers during the Mbarara pilot, or is the pilot network limited to private, NGO and faith-based providers?

Respuesta: Include government hospitals among the approved Mbarara pilot providers.

P-003 Must the system record each distributor's sale to an end customer, including voucher number, customer, date, place and amount, or only distribution to distributors and aggregate retail sales? If individual sales are required, who records them?

Respuesta (suposición de la IA): We propose recording each retail sale by voucher number, customer, actual sale date, place and amount, rather than relying only on aggregate figures; the distributor supplies the details and an authorized VMU user enters them, with totals derived from those records.

P-004 When a voucher is sold for a client and partner, is it one voucher number shared by two portions or two separately numbered vouchers, and how are the three visit slips identified for each person?

Respuesta (suposición de la IA): We propose one voucher number shared by the client and partner portions, with three separately identified slips per person; each visit barcode identifies the shared voucher number, client or partner, and initial consultation, first follow-up or second follow-up.

P-005 What are the definitive formats, lengths, allowed characters and uniqueness rules for the project, group-batch, batch, voucher and security codes, and which codes appear in each client or partner visit barcode? Do examples P001 and GP0001 override the stated lengths?

Respuesta: P001 and GP0001 establish the project and group-batch formats, and each client or partner visit barcode also includes the security code. The format, allowed characters, lengths and uniqueness scope of every code, including batch, voucher and security codes, are still to be decided by the client.

P-006 What minimum quantity must a voucher-creation run produce, may an authorized user configure that minimum, and must each batch and group-batch contain fixed numbers of vouchers and batches?

Respuesta: Each group-batch always has 100 batches and each batch exactly 10 vouchers, and an authorized user may configure the minimum number of vouchers per creation run. The minimum number itself is still to be decided by the client.

P-007 When does a voucher's validity start and end, at which sales and treatment or claim stages must expiry be enforced rather than warned about, and do changes to its validity date affect vouchers already sold or visits already made?

Respuesta: Validity starts on creation, expiry blocks sales, treatment and claim acceptance, and a later date amendment affects sold vouchers. When validity ends is still to be decided by the client.

P-008 What does withholding a voucher prevent—distribution, retail sale, treatment, claim acceptance or payment—and may an authorized user release it again? Should prohibited actions be rejected rather than merely warned about?

Respuesta: An authorized user may release a withheld voucher, and each blocked action is rejected rather than merely warned about. Which actions withholding blocks (distribution, retail sale, treatment, claim acceptance and/or payment) is still to be decided by the client.

P-009 Which eligible voucher numbers should be allocated first to a distributor, and what should happen when the requested quantity exceeds available eligible stock?

Respuesta (suposición de la IA): We propose allocating unassigned, unexpired and non-withheld vouchers in ascending voucher-number order; if eligible stock is insufficient, reject the entire request without making a partial allocation.

P-010 How should the amount paid by an end customer for a voucher be determined and recorded, and must the system enforce the printed maximum retail price?

Respuesta: Use a fixed approved retail price. The actual amount is recorded for each retail sale, and sales above the maximum retail price are rejected.

P-011 Are the distribution date and sale date separate fields, which of them may be backdated, and should future dates be rejected for each?

Respuesta (suposición de la IA): We propose separate distribution and retail-sale dates: distribution is fixed to the current system date, a sale may be entered with its actual past date, and future dates are rejected for both.

P-012 Which vouchers may a distributor return, including vouchers already sold to customers, used, expired or withheld; do accepted returns become saleable again or void; and is the refund based on the original wholesale rate or the rate at return?

Respuesta: Limit returns to the returning distributor's unsold and unused vouchers. Accepted returns become saleable again, and refunds use the original invoiced wholesale rate.

P-013 What currency, monetary precision and rounding rules apply to voucher prices, sales and returns, drug prices and claim amounts?

Respuesta: Voucher prices, sales, returns, drug prices and claims use whole currency units, and rounding occurs per item. The currency and the rounding method are still to be decided by the client.

P-014 For each client and partner using a voucher, is a first consultation followed by at most two follow-ups, and what sequence, intervals and provider-change rules apply? How should repeat or out-of-order visit claims be handled?

Respuesta: One initial consultation and at most two follow-ups are confirmed, separately for the client and the partner, and repeat or out-of-order visit claims are rejected. The permitted follow-up intervals and provider changes are still to be decided by the client.

P-015 If a patient is referred to a hospital or provider outside the approved service-provider network, should the system record and reimburse that provider's treatment or only record the referral, and what destination information is required?

Respuesta: Treat an out-of-network referral as a recorded destination and reason, without voucher reimbursement; at least the destination's name and location and the referral reason are required.

P-016 Which voucher conditions make a treatment claim ineligible—for example, a voucher not yet sold, returned, withheld, expired or already used for that person and visit—and should such a claim be rejected or quarantined?

Respuesta (suposición de la IA): We propose accepting a treatment claim only when the voucher has been sold, not returned or withheld, was valid on the treatment date, and has no accepted claim for that patient and visit; quarantine other eligibility failures for review and reject an already paid duplicate.

P-017 What identifies a duplicate claim: the treatment-form number or the combination of voucher number, patient type and visit? May a rejected claim be submitted again using the same identifiers?

Respuesta (suposición de la IA): We propose using voucher number, patient type and visit to identify a unique payable claim, while the treatment-form number identifies its paper form; a rejected form may be resubmitted under the same form number with its new submission and prior rejection retained, but may not create a second accepted claim for that visit.

P-018 Which claim-header fields must be present for a claim to be accepted at each visit, particularly doctor's notes and HIV details described as conditional even though all fields except contact number are called mandatory?

Respuesta (suposición de la IA): We propose requiring the listed claim-header fields for acceptance, including system-populated identifiers and calculated amount, except contact number; doctor's notes are required only when clinically indicated, and HIV details only when such information exists.

P-019 At each visit type, which clinical details may or must be captured: are syndromes, examinations, laboratory tests and other measures permitted at follow-ups, or are follow-ups limited to diagnosis and drugs?

Respuesta (suposición de la IA): We propose allowing syndromes, examinations, laboratory tests and other measures at follow-ups when supported by the approved treatment matrix, while requiring only the clinical fields specified for that syndrome and visit; follow-up diagnosis and drugs remain available.

P-020 What HIV-related fields and allowed values must a treatment claim capture when HIV information exists, and can the referenced HIV-details form be provided?

Respuesta: The HIV-details form, with its fields, allowed values and conditions for capture when HIV information exists, is still to be provided by the client; until then, no additional HIV-specific claim validation can be specified.

P-021 How should patient thumbprints be captured and compared when claims are submitted on paper, and may a claim proceed if a readable print, a prior print or the reader is unavailable? What approval and recording are needed for any exception?

Respuesta: An unreadable print, an absent prior print or an unavailable reader puts the claim on hold. How the thumbprint on a paper claim is digitized and compared with prior prints, the exception approver, and the required evidence and audit record are still to be decided by the client.

P-022 Which claim irregularities count as fraud events for automatic provider inactivation, do fraud entries and thumbprint mismatches use the same more-than-two-event threshold, over what period are events counted, and does inactivation prevent entry of claims for earlier treatments?

Respuesta: Thumbprint mismatches share the more-than-two-event threshold, events are counted for all time, and an inactive provider can submit claims for treatments completed before inactivation. Which confirmed claim irregularities count as fraud is still to be decided by the client.

P-023 When a treatment form lacks required information or contains false data, should it be rejected before entry or entered into quarantine, and what statuses, correction authority and transitions govern its return, later resubmission, acceptance and payment?

Respuesta (suposición de la IA): We propose logging each received form, marking an incomplete or apparently false form rejected and quarantined without accepting a claim, and recording the reason; an authorized reviewer can process a corrected resubmission in the following month's batch, with payment only after acceptance and the prior status retained.

P-024 What approved treatment matrix and clinical algorithms apply to each syndrome and visit, including examinations, diagnoses, tests, drugs and quantities? When may a provider depart from them, and how should justified deviations be recorded and evaluated for claim validity?

Respuesta: A deviating claim is accepted. The approved TA-OBA treatment matrix by syndrome and visit, the permitted deviations and the required justification are still to be supplied by the client.

P-025 If an amount derived from provider payment terms and drug prices differs from the amount specified by the treatment matrix, which rule determines the payable claim amount, and how are consultation, laboratory and drug components calculated?

Respuesta: The approved treatment matrix is authoritative when its amounts differ from the provider-term and drug-price formula. How the consultation, laboratory and drug components are calculated, and how discrepancies affect payment, are still to be decided by the client.

P-026 For an initial consultation, is a laboratory fee payable only when a test was actually performed, and how should that fee be calculated when several tests were performed?

Respuesta: The first-visit laboratory fee is payable only if a test was actually performed, and several performed tests earn one contracted lab fee.

P-027 Is each drug's reimbursable retail price the same for all providers, or may it vary by provider?

Respuesta: Adopt one reimbursable retail price per drug for all providers.

P-028 Which event date—treatment, claim submission, entry or payment—determines the applicable provider fees and drug prices, and what happens if rate periods overlap or rates change retrospectively?

Respuesta: The treatment date is the effective date for provider fees and drug prices, effective periods may not overlap, and retrospective rate changes recalculate accepted claims.

P-029 Does 'bi-monthly' mean twice per calendar month or once every two months, and what submission and payment period boundaries and cutoffs apply to monthly and bi-monthly providers?

Respuesta: Bi-monthly means twice per calendar month. The start and end of each submission and payment period and its cutoffs, for both bi-monthly and monthly providers, are still to be decided by the client.

P-030 Must the system initiate provider payments, merely calculate claims and generate reports for MSIU to arrange payment, or also record completed payments, including dates, amounts, references, partial or withheld amounts? Are cash payments allowed alongside bank transfers?

Respuesta: The system only calculates claims and produces payment reports, and cash is allowed alongside bank transfer.

P-031 Must the provider's summary claims form be recorded and reconciled with individual treatment forms, and what action is required if the stated number of forms differs from the number physically received?

Respuesta (suposición de la IA): We propose recording the provider's summary claims form and reconciling its stated count with the physically received forms and their individual numbers; permit a mismatched receipt with a documented discrepancy, but investigate missing or extra forms before the affected claims are accepted or paid.

P-032 When feedback is recorded for a voucher used by a client and partner across multiple visits, which person's claim and visit supply each automatically populated detail, and how are treatment success and partner-treated status established and populated?

Respuesta: Each feedback record selects the client or the partner and one visit, treatment success comes from patient feedback, and partner-treated is derived from an accepted partner claim.

P-033 What response values should feedback use for treatment success, counseling satisfaction and privacy satisfaction; should the satisfaction fields share the stated treatment-satisfaction scale; and is each feedback response about the client, partner or both?

Respuesta: Counseling and privacy satisfaction use the treatment-satisfaction scale ('Not at all / Moderate / Good / Completely'), and each response concerns the client. The treatment-success response values are still to be decided by the client.

P-034 What data sources and calculation rules define the required reporting indicators for documentation quality, treatment according to algorithms, justified alterations, treatment errors and their trends over time?

Respuesta: The Programme Design Study, and the data sources, numerators, denominators and classification rules for documentation quality, algorithm adherence, justified alterations and treatment errors, with the time periods and comparison method for their trends, are still to be supplied by the client.

P-035 Are only the listed standard reports required for the first release, or are customized analytical, medical, financial and statistical reports also required now; if so, which ones?

Respuesta: The listed standard reports are required; additional customized analytical, medical, financial and statistical reports may be designed later rather than specified for the first release.

P-036 Which user groups are required, and which may create vouchers, change validity dates, manage providers and payment terms, amend claims, approve payments, and view or print each type of record? Which groups may view or change sensitive client, HIV and thumbprint information?

Respuesta: The user groups and their create, edit, delete, view and print permissions for vouchers, validity, providers, payment terms, claims, payments and reports, and which groups may view or change client identity, HIV details and thumbprints, are still to be decided by the client.

P-037 What confidentiality, access, audit and retention rules apply to patient identity, HIV information and thumbprints, including whether those details may appear in printed reports?

Respuesta: Each type of sensitive detail (patient identity, HIV data and thumbprints) is masked in printed reports. The confidentiality and access restrictions, the required access and change audit logs, and the retention periods and disposal rules are still to be decided by the client.

P-038 What account-security rules are required for passwords, failed-login lockout, password reset and session timeout?

Respuesta: The password-strength requirements, the failed-login threshold and lockout duration, the verified password-reset process and the idle-session timeout are still to be decided by the client.

P-039 For records other than immutable vouchers and uneditable treatment details in feedback, which claims and transactions may be corrected, cancelled or deleted after entry, and must their original values be retained?

Respuesta: Deletion is allowed. Which entered claims, distributions, retail sales, returns and payments each group may correct or cancel, including after finalization, is still to be decided by the client.

P-040 What measurable response-time and report-generation targets, availability targets, concurrent user counts and transaction volumes must the system support during the pilot and any planned expansion?

Respuesta: The measurable pilot and expansion targets for interactive response time, report generation, availability, concurrent users and daily and peak transaction volumes, distinguishing the 20,000-voucher pilot from later capacity, are still to be decided by the client.
